

Problem Statement

Build the following system using Node.js or Nestjs framework and MongoDB or MySQL database:

Create APIs for following operations in NodeJS. You can use any framework in NodeJS, Nestjs, express, etc.

1. Create an Admin account, User account
2. There will be only one Admin.
3. The user can Sign up or Sign In.
4. The website will display products added by users.
5. Admin can do delete/update operations on Users.
6. Admin can decide whether products can be displayed on a web page or not and also can do delete/update operations on products.

Databases:

- User data
- Product data

ALL THE BEST!
